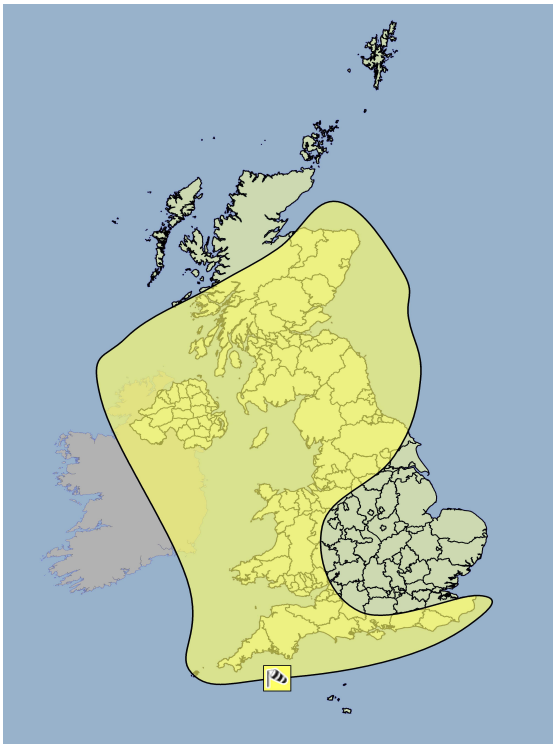
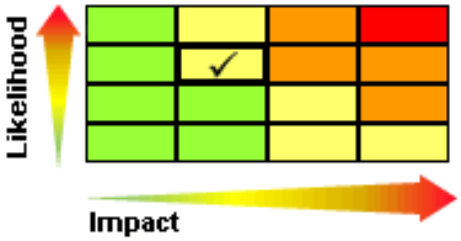
National Severe Weather Warning Service





Chief Forecasters Assessment
A powerful jet stream stretching across the Atlantic into the UK will steer a number of active weather systems across the UK during Monday and Tuesday. One such system will sweep eastwards later on Monday into Monday night, with the windy weather maintained well into Tuesday by a vigorous depression passing northern Scotland. Developments are complex so there is still considerable uncertainty in details of these developments, especially by Tuesday.

The Met Office have issued a **Yellow Alert** of **Wind**

Valid from **16:00 on Mon, 01st Jun 2015** until **18:00 on Tue, 02nd Jun 2015**

An unseasonably windy spell is likely across many parts of the UK later on Monday, overnight and well into Tuesday, as active frontal systems sweep across the UK. An initial swathe of southerly gales will move east across many later on Monday, giving gusts to 50 mph widely but 60-65 mph across exposed Irish Sea and perhaps some English Channel coasts. Winds will become more west or southwesterly on Tuesday, with further gales in places, before gradually easing later. Heavy rain will accompany the strong winds at times and large waves may affect some coasts in the west and south.

Given the unseasonable nature of the winds, the public should be aware of the potential for disruption to transport and outdoor activities. Damage to some trees seems likely, given that they are in full leaf.

There remains uncertainty in the areas likely to be worst affected and this warning will be updated on Monday in the light of new information.
